## Chapter 2

## Organizing Data

## PEARSON

## Section 2.1 <br> Variables and Data

## PEARSON

## Definition 2.1

## Variables

Variable: A characteristic that varies from one person or thing to another.

Qualitative variable: A nonnumerically valued variable.
Quantitative variable: A numerically valued variable.
Discrete variable: A quantitative variable whose possible values can be listed.

Continuous variable: A quantitative variable whose possible values form some interval of numbers.

## Figure 2.1

## Types of variables

## Definition 2.2

## Data

Data: Values of a variable.
Qualitative data: Values of a qualitative variable.
Quantitative data: Values of a quantitative variable.
Discrete data: Values of a discrete variable.
Continuous data: Values of a continuous variable.

## Section 2.2

## Organizing Qualitative Data

## PEARSON

## Definition 2.3

## Frequency Distribution of Qualitative Data

A frequency distribution of qualitative data is a listing of the distinct values and their frequencies.

## Table 2.1

## Political party affiliations of the students in introductory statistics

|  |  | $R$ | $O$ | $R$ | $R$ | $R$ | $R$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| D | O | O | R | D | O | O | R |
| D | D |  |  |  |  |  |  |
| D | R | O | D | R | R | O | R |
| D | O | D | D | D | R | O | D |
| O | R | D | R | R | R | R | D |

## Table 2.2

Table for constructing a frequency distribution for the political party affiliation data in Table 2.1

| Party | Tally | Frequency |
| :--- | :--- | :---: |
| Democratic | HI I HI III | 13 |
| Republican | HI UH IHI III | 18 |
| Other | HI IIII | 9 |
|  |  | 40 |

## Definition 2.4

## Relative-Frequency Distribution of Qualitative Data

A relative-frequency distribution of qualitative data is a listing of the distinct values and their relative frequencies.

## Table 2.3

Relative-frequency distribution for the political party affiliation data in Table 2.1

| Party | Relative <br> frequency |  |
| :--- | :---: | :---: |
| Democratic | 0.325 | $\leftarrow 13 / 40$ |
| Republican | 0.450 | $\leftarrow 18 / 40$ |
| Other | 0.225 | $\leftarrow 9 / 40$ |
|  | 1.000 |  |

## Figure 2.2

## PEARSON

## Table 2.4

Number of TV sets in each of 50 randomly selected households.

| 1 | 1 | 1 | 2 | 6 | 3 | 3 | 4 | 2 | 4 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 2 | 1 | 5 | 2 | 1 | 3 | 6 | 2 | 2 |
| 3 | 1 | 1 | 4 | 3 | 2 | 2 | 2 | 2 | 3 |
| 0 | 3 | 1 | 2 | 1 | 2 | 3 | 1 | 1 | 3 |
| 3 | 2 | 1 | 2 | 1 | 1 | 3 | 1 | 5 | 1 |

## Table 2.5

Frequency and relative-frequency distributions, using singlevalue grouping, for the number-of-TVs data in Table 2.4

| Number <br> of TVs | Frequency | Relative <br> frequency |
| :---: | :---: | :---: |
| 0 | 1 | 0.02 |
| 1 | 16 | 0.32 |
| 2 | 14 | 0.28 |
| 3 | 12 | 0.24 |
| 4 | 3 | 0.06 |
| 5 | 2 | 0.04 |
| 6 | 2 | 0.04 |
|  | 50 | 1.00 |

## Table 2.6

Days to maturity for 40 short-term investments

$$
\begin{array}{llllllll}
70 & 64 & 99 & 55 & 64 & 89 & 87 & 65 \\
62 & 38 & 67 & 70 & 60 & 69 & 78 & 39 \\
75 & 56 & 71 & 51 & 99 & 68 & 95 & 86 \\
57 & 53 & 47 & 50 & 55 & 81 & 80 & 98 \\
51 & 36 & 63 & 66 & 85 & 79 & 83 & 70
\end{array}
$$

## Table 2.7

Frequency and relative-frequency distributions, using limit grouping, for the days-to-maturity data in Table 2.6

| Days to <br> maturity | Tally | Frequency | Relative <br> frequency |
| :---: | :--- | :---: | :---: |
| $30-39$ | III | 3 | 0.075 |
| $40-49$ | I | 1 | 0.025 |
| $50-59$ | IH III | 8 | 0.200 |
| $60-69$ | HI I I | 10 | 0.250 |
| $70-79$ | HI II | 7 | 0.175 |
| $80-89$ | HI II | 7 | 0.175 |
| $90-99$ | IIII | 4 | 0.100 |
|  |  | 40 | 1.000 |

## Definition 2.7

## Terms Used in Limit Grouping

Lower class limit: The smallest value that could go in a class.
Upper class limit: The largest value that could go in a class.
Class width: The difference between the lower limit of a class and the lower limit of the next-higher class.

Class mark: The average of the two class limits of a class.

## Definition 2.8

## Terms Used in Cutpoint Grouping

Lower class cutpoint: The smallest value that could go in a class.
Upper class cutpoint: The largest value that could go in the next-higher class (equivalent to the lower cutpoint of the next-higher class).

Class width: The difference between the cutpoints of a class.
Class midpoint: The average of the two cutpoints of a class.

## Definition 2.9

## Histogram

A histogram displays the classes of the quantitative data on a horizontal axis and the frequencies (relative frequencies, percents) of those classes on a vertical axis. The frequency (relative frequency, percent) of each class is represented by a vertical bar whose height is equal to the frequency (relative frequency, percent) of that class. The bars should be positioned so that they touch each other.

- For single-value grouping, we use the distinct values of the observations to label the bars, with each such value centered under its bar.
- For limit grouping or cutpoint grouping, we use the lower class limits (or, equivalently, lower class cutpoints) to label the bars. Note: Some statisticians and technologies use class marks or class midpoints centered under the bars.

## Section 2.4

## Distribution Shapes

## PEARSON

## Definition 2.10

## Distribution of a Data Set

The distribution of a data set is a table, graph, or formula that provides the values of the observations and how often they occur.

## Figure 2.10

## Relative-frequency histogram and approximating smooth curve for the distribution of heights

## Figure 2.11

## Common distribution shapes

(a) Bell shaped

(d) Reverse J shaped

(a)

(b)

## Definition 2.12

## Population and Sample Distributions; Distribution of a Variable

The distribution of population data is called the population distribution, or the distribution of the variable.

The distribution of sample data is called a sample distribution.

Population Distribution

(a)

## Figure 2.13

## Population distribution and six sample distributions for household size

(b)

## Key Fact 2.1

## Population and Sample Distributions

For a simple random sample, the sample distribution approximates the population distribution (i.e., the distribution of the variable under consideration). The larger the sample size, the better the approximation tends to be.
